

Herrco Cosmetics “quadruples” its capacity...

Herrco Cosmetics has invested over £600,000 in its liquid production and blending hall, increasing output by over 400%.

It has been a long project which has just been completed, In 2011 Herrco Cosmetics undertook steps to quadruple their production capabilities and commit to a substantial financial investment in new production equipment, including processing vessels, full CIP (clean in place) upgrade for all vessels and a pharmaceutical grade dispensary, resulting in the creation of a world class liquid production and blending hall.

With the addition to our current mixing gallery we have added two new production vessels, 2000kg and 4000kg. The addition of these new vessels brings with it fully automated dispensing of certain chemicals, reduced mixing times. Automatic flash Blender's has been added to vessels to disperse powders and exfoliant in seconds. All our vessels have been upgraded to full Clean In Place (CIP) technology decreasing cleaning and sanitisation to just eight minutes.

Mark Deering, Head of Operations commented: “The new mixing and blending facility is phenomenal, what I love about this company is whenever we do anything it's to the highest standard's possible, it really is world class. With all the upgrades this brings Herrco Cosmetics investment this year just short of £1,000,000, for us our growth to British manufacturing is outstanding”
