

Herrco Cosmetics invests in 2nd Tube Line

Herrco Cosmetics have recently acquired advanced machinery to help accommodate growing client demand for high-quality cosmetic products matched with professional manufacturing facilities and superlative quality control.

The new investment, a brand new 602 tube line from Norden, provides clean and accurate tube filling and sealing at optimum speeds of up to 60 tubes per minute. With advanced two colour extrusion filling, they are capable of filling plastic and laminate tubes from 1-300ml in a range of diameter and lengths. With innovative adjustable sealing stations and user-friendly touch screen panels, the latest addition to their production equipment will maintain Herrco's position as a first class manufacturer.

Combined with existing tube machinery the newest addition enables the production site to now competently output 8,000 units per hour. Our chosen supply partner, Norden Machinery, is the leading manufacturer of tube filling systems in the world. Their first tube filling machine was built in 1934 since then the 5000 NORDEN installations in operation around the world make them world class leaders in tube filling and sealing technology.

Derek Herrmann, Technical Director said, 'This machinery is yet another example of the phenomenal growth we are currently experiencing and our commitment to stepping up production by over 60% in the next year'.
